1. General Information

1.1 Identification of The EUT

Product: Digital Multimeter

Model No.: 33XR-A

Rated Power: DC 9 V from battery

Power Cord: N/A

Data Cable: N/A

Sample receiving date: Sep. 23, 2008

Testing date: Oct. 15, 2008 ~ Jan. 06, 2009

Note 1: This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

Note 2: The test report only allows to be revised within three years from its original issued date unless further standard or the requirement was noticed.

Note 3: When determining the test conclusion, the Measurement Uncertainty of test has been considered.

1.2 Additional Information About The EUT

The EUT is a Digital Multimeter. It has to fulfill the requirements of CISPR 11 emission relevant standards.

For more detail features, please refer to user's Manual.

1.3 Peripherals Equipment

Resistance $\times 1$

2. Test Summary

<i>Emission (EN 61326-1: 2006)</i>			
Standard	Test Type	Result	Remarks
CISPR 11: 2003 Class B	Radiated Test	PASS	Pass by -8.90 dB at 782.700 MHz with antenna polarization Vertical

IEC 61000-4-2: 1995 +A1: 1998 +A2: 2000	ESD test	PASS	Criterion B	Meets the requirements of Performance Criterion A
IEC 61000-4-3: 2006 +A1: 2007	RS test	PASS	Criterion A	Meets the requirements of Performance Criterion A

Remark:

The EUT has been tested/evaluated and pass the above standards without modification.

3. Test Specifications

3.1 Standards

EN 61326-1: 2006 Electrical equipment for measurement, control and laboratory use
EMC requirements Part 1: General requirements.

EN 61000-3-2:2006 Electromagnetic compatibility- Part 3. Limits
Section 2. Limits for harmonic current emissions (equipment input current ≤ 16 A per
phase)

EN 61000-3-3: 1995+A1: 2001+A2: 2005 Electromagnetic compatibility - Part 3.
Limits Section 3. Limitation of voltage fluctuations and flicker in low-voltage supply
systems for equipment with rated current ≤ 16 A

CISPR 11: 2003 Limits and methods of measurement of radio disturbance
characteristics of industrial, scientific and medical (ISM) radio-frequency equipment

Since the EUT is not connected to AC source, directly the tests are not applicable for it.
The following test items were exempted based on engineering judgment.

- EN 61000-3-2 Harmonic test
- EN 61000-3-3 Flicker test
- IEC 61000-4-4 EFT test
- IEC 61000-4-5 Surge test
- IEC 61000-4-6 CS test
- IEC 61000-4-11 Dip test

3.2 Mode of operation during the test

The EUT was supplied with DC 9 V from battery and tested in resistance function
mode.

3.3 Performance criteria

The performance criterias listed below are based on those regulated in the standard, specified by the manufacturer or derived from the product specification.

Criteria A:

During testing, normal performance within the specification limits.

Criteria B:

During testing, temporary degradation, or loss of function or performance which is self-recovering.

Criteria C:

During testing, temporary degradation, or loss of function or performance which requires operator intervention or system reset occurs.

4. CISPR 11 Radiated Emission Test

4.1 Operating Environment

Temperature: 25

Atmospheric Pressure: 1023 hPa

Relative Humidity: 50 %

Test Voltage: DC 9 V from battery

4.2 Test Procedure

Radiated testing was performed at an 10 meter open area test site. The equipment under test were placed on a turntable top 0.8meter above ground. The table was 360 degrees to determine the position of the highest radiation. EUT is set 10 meters from the EMI receiving antenna, which is mounted on a variable height mast. The antenna height is varied between one meter and four meters above ground to find the maximum value of the field strength. Both horizontal polarization and vertical polarization of the antenna was set to conduct the measurement. The bandwidth was set on the EMI meter 120 kHz. The levels are quasi peak value readings. The frequency spectrum from 30MHz to 1000MHz was investigated.

4.3 Test Equipment

4.4 Radiated Emission Limit

Frequency (MHz)	Distance(m)	Class A	Class B
30~230	10	40	30
230~1000	10	47	37

Note:

1. The tighter limit shall apply at the edge between two frequency bands.
2. Distance refers to the distance in meters between the measuring instrument antenna and the closet point of EUT.

4.5 Uncertainty of Radiated Emission

Expanded uncertainty (k=2) of radiated emission measurement is ± 4.68 dB.

5.1 Operating Environment

Temperature:	25	Atmospheric Pressure:	1023 hPa
Relative Humidity:	55 %	Test Voltage:	DC 9 V from battery

5.2 Purpose

The object of the test is to evaluate the ESD immunity performance of EUT.

5.3 Test Set-Up

A horizontal coupling plane (HCP) was placed on a non-metallic table 0.8 m above a reference ground plane (RGP) and connected to it with a cable with two 470 k resistors. The EUT was placed on an insulation sheet on the HCP and was operated according to the specified operating mode.

A vertical coupling plane (VCP) was connected to the RGP with a cable with two 470 k resistors.

6. IEC 61000-4-3 Radiated, Radio-Frequency, Electromagnetic Field Immunity Test

6.1 Operating Environment

Temperature: 23 Atmospheric Pressure: 1023 hPa
Relative Humidity: 53 % Test Voltage: DC 9 V from battery

6.2 Purpose

This test method subjects the EUT to a power source of disturbance comprising electric and magnetic field, simulating those coming from intentional RF transmitters.

6.3 Test Set-Up

The EUT was placed on a non-metallic table 0.8 meter above the reference ground plane (RGP) and was operated according to its specified operating mode.

Ferrite tiles/absorbers were placed on the RGP between the EUT and the antenna to reduce the reflections from the RGP. The EUT and its cables were exposed for the electromagnetic field for 1.5m vertically and 1.5m horizontally.

The distance between antenna and EUT is 3 meter.

Note: The above equipments are within the valid calibration period.

6.6 Generation of The Electromagnetic Field

The electromagnetic field is generated from a computer controlled signal generator. The output power is amplified and then radiated from broadband log periodic antennas. For each sweep a pre-recorded empty chamber calibration file is used to establish the required field strength. When using these files the field strength inside an area of 1.5/1.0 m x 1.5m is in accordance with the standard.
