USER'S MANUAL

AM91RS

AMPROBE
A United Dominion Company
1) SAFETY
This manual contains information and warnings that must be followed for operating the meter safely and maintaining the meter in a safe operating condition. If the meter is used in a manner not specified by the manufacturer, the protection provided by the meter may be impaired. The meter is intended only for indoor use.

V/R: Category IV 600V ac and dc, and Category III 1000V dc and 750V ac.
mA/µA: Category III 500V ac, and Category II 300V dc.
A: Category III 600V ac, and Category II 300V dc.

PER IEC61010 OVERVOLTAGE INSTALLATION CATEGORY
OVERVOLTAGE CATEGORY I
Equipment of OVERVOLTAGE CATEGORY I is equipment for connection to circuits in which measures are taken to limit the transient overvoltages to an appropriate low level.
Note – Examples include protected electronic circuits.

OVERVOLTAGE CATEGORY II
Equipment of OVERVOLTAGE CATEGORY II is energy-consuming equipment to be supplied from the fixed installation.
Note – Examples include household, office, and laboratory appliances.

OVERVOLTAGE CATEGORY III
Equipment of OVERVOLTAGE CATEGORY III is equipment in fixed installations.
Note – Examples include switches in the fixed installation and some equipment for industrial use with permanent connection to the fixed installation.

OVERVOLTAGE CATEGORY IV
Equipment of OVERVOLTAGE CATEGORY IV is for use at the origin of the installation.
Note – Examples include electricity meters and primary over-current protection equipment.
TERMS IN THIS MANUAL

**WARNING** identifies conditions and actions that could result in serious injury or even death to the user.

**CAUTION** identifies conditions and actions that could cause damage or malfunction in the instrument.

**WARNING**
To reduce the risk of fire or electric shock, do not expose this product to rain or moisture. To avoid electrical shock hazard, observe the proper safety precautions when working with voltages above 60 VDC or 30 VAC rms. These voltage levels pose a potential shock hazard to the user. Do not touch test lead tips or the circuit being tested while power is applied to the circuit being measured. Keep your fingers behind the finger guards of the test leads during measurement. Inspect test leads, connectors, and probes for damaged insulation or exposed metal before using the instrument. If any defects are found, replace them immediately. Do not measure any circuit that draws more than the current rating of the protection fuse. Do not attempt a current measurement where the open circuit voltage is above the protection fuse voltage rating. Suspected open circuit voltage can be checked with voltage functions. Never attempt a voltage measurement with the test lead inserted into the μA/mA or A input jack. Only replace the blown fuse with the proper rating as specified in this manual.

**CAUTION**
Disconnect the test leads from the test points before changing functions. Always set the instrument to the highest range and work downward for an unknown value if you are using manual ranging mode.

**INTERNATIONAL ELECTRICAL SYMBOLS**

⚠️ Caution ! Refer to the explanation in this Manual

⚠️ Caution ! Risk of electric shock

 электро ⚡ Earth (Ground)

⚠️ Caution ! Double Insulation or Reinforced insulation
2) ELECTROMAGNETIC COMPATIBILITY (EMC)
The instrument meets EN55022(1994/A1; 1995/Class B) and EN50082-1(1992)
3) PRODUCT DESCRIPTION

Panel Illustration

1) 4-3/4 digits 40000 counts LCD display

2) Push-buttons for special functions & features

3) Selector to turn the Power On or Off and Select a function

4) Input Jack for 10A (20A for 30sec) current function

5) Input Jack for all functions EXCEPT current (μA, mA, A) functions

6) Common (Ground reference) Input Jack for all functions

7) Input Jack for milli-amp and micro-amp current functions
Analog bar-graph
The analog bar graph provides a visual indication of measurement like a traditional analog meter needle. It is excellent in detecting faulty contacts, identifying potentiometer clicks, and indicating signal spikes during adjustments.

DC+AC True RMS
DC+AC True RMS is a term which identifies a DMM that responds accurately to the total effective RMS value regardless of the waveforms such as: square, sawtooth, triangle, pulse trains, spikes, as well as distorted waveforms with the presence of harmonics and DC components. Harmonics and DC components may cause:
1) Overheated transformers, generators and motors to burn out faster than normal
2) Circuit breakers to trip prematurely
3) Fuses to blow
4) Neutrals to overheat due to the triplen harmonics present on the neutral
5) Bus bars and electrical panels to vibrate

Crest Factor
Crest Factor is the ratio of the Crest (instantaneous peak) value to the True RMS value, and is commonly used to define the dynamic range of a True RMS DMM. A pure sinusoidal waveform has a Crest Factor of 1.4. A badly distorted sinusoidal waveform normally has a much higher Crest Factor.

NMRR (Normal Mode Rejection Ratio)
NMRR is the DMM's ability to reject unwanted AC noise effect which can cause inaccurate DC measurements. NMRR is typically specified in terms of dB (decibel). This product has a NMRR specification of 60dB at 50 and 60Hz, which means a good ability to reject the effect of AC noise in DC measurements.

CMRR (Common Mode Rejection Ratio)
Common mode voltage is voltage present on both the COM and VOLTAGE input terminals of a DMM, with respect to ground. CMRR is the DMM's ability to reject common mode voltage effect which can cause digit rattle or offset in voltage measurements. This series has a CMRR specifications of 60dB at DC to 60Hz in ACV function; and 120dB at DC, 50 and 60Hz in DCV function. If neither NMRR nor CMRR specification is specified, a DMM's performance will be uncertain.
4) OPERATION
ACV, ACV + Hz, & dBm + Hz functions
Defaults at ACV. Press SELECT button momentarily to select ACV + Hz. Press SELECT button momentarily again to select dBm + Hz. Input sensitivity for Hz varies automatically with voltage range selected in ACV + Hz function. It is designed especially for measuring the frequency of high voltage noisy electrical signals.

Note: Default Reference impedance 600Ω will be displayed for 2 seconds before displaying the dBm + Hz readings. Press dBm-Ω (RANGE) button momentary to select different reference impedance from 4, 8, 16, 32, 50, 75, 93, 110, 125, 135, 150, 200, 250, 300, 500, 600, 800, 900, 1000, up to 1200Ω. Impedance values will again be displayed for 2 seconds before displaying the dBm + Hz readings.
**DCV, DC + AC V functions**

Defaults at DC. Press **SELECT** button momentarily to select DC + AC. Analog bargraph will be disabled in the DC + AC mode.

**Hold**

The hold function freezes the display for later view. Press the **HOLD** button momentarily to activate and to exit the hold function.
DC, AC, AC + Hz mV functions
Defaults at DC. Press SELECT button momentarily to select AC. Press SELECT button momentarily again to select AC + Hz.

DC, AC, AC + Hz Adapter functions
The operation of Adapter function is similar to the mV function. Defaults at DC. Press SELECT button momentarily to select AC. Press SELECT button momentarily again to select AC + Hz. Adapter function is of extra high input impedance up to 1000MΩ, and there is no decimal point on the digital display. It can cope with most voltage output sensors/ transducers with the highest sensitivity and the least current drain.
Hz, % + Hz functions
Defaults at Hz. Press SELECT button momentarily to select % + Hz.

Note: Unlike the AC + Hz function, this high resolution Hz function is set at the highest input sensitivity to measure digital type electronic signals.

Backlighted display
Press the SELECT button for 1 second or more to turn on and off the display backlight function. The backlight will also be turned off automatically after 42 seconds to extend battery life.
Ω Resistance, nS + GΩ Conductance, ✗ Continuity functions
Default at Ω. Press SELECT button momentarily to select nS + GΩ Conductance for resistance measurement beyond 40MΩ. Press SELECT button momentarily again to select ✗ Continuity function which is convenient for checking wiring connections and operation of switches. A continuous beep tone indicates a complete wire.

CAUTION
Using resistance and continuity function in a live circuit will produce false results and may damage the instrument. In many cases the suspected component must be disconnected from the circuit to obtain an accurate reading.
Capacitance, Diode test function

Default at . Press SELECT button momentarily to select Diode test function.

**CAUTION**

Discharge capacitors before making any measurement. Large value capacitors should be discharged through an appropriate resistance load.

**Note:**
Normal forward voltage drop (forward biased) for a good silicon diode is between 0.400V to 0.900V. A reading higher than that indicates a leaky diode (defective). A zero reading indicates a shorted diode (defective). An OL indicates an open diode (defective). Reverse the test leads connections (reverse biased) across the diode. The digital display shows OL if the diode is good. Any other readings indicate the diode is resistive or shorted (defective).
μA, mA, and A Current functions
Default at DC. Press SELECT button momentarily to select AC. Press SELECT button momentarily again to select AC + Hz. A will be selected automatically when the correct input jack is plugged in.

Note:
When measuring a 3-phase system, special attention should be taken to the phase to phase voltage which is significantly higher than the phase to earth voltage. To avoid exceeding the voltage rating of the protection fuse(s) accidentally, always consider the phase to phase voltage as the working voltage for the protection fuse(s).

RS232C PC computer interface capabilities
The instrument equips with an optical isolated interface port at the meter back for data communication. PC interface kit (RS232C optical adapter cable + RS232C software floppies) is required to connect the meter to the PC computer. The RS232C Data Recording System software equips with a digital meter, an analog meter, a comparator meter, and a Data Graphical recorder display. Refer to the README file in the interface kit for further details.
40000 counts high resolution slow mode
Press the 40000 button momentarily to enter the 4-3/4 digit high resolution slow mode. The digital display updates 1.25 times per second nominal to give you smooth readings as well as the full accuracy of the meter. Press the 4000 button momentarily to return to the power up default 3-3/4 digit fast mode. The digital display updates 5 times per second nominal to give you the maximum measuring speed of the meter.

RECORD mode
Press and hold the RECORD button for one second or more to activate recording mode with nominal 50ms sampling speed in most functions. The LCD annunciators “R” & “MAX-MIN AVG” turn on. The meter beeps when new maximum or minimum reading is updated. Press the button momentarily to read throughout the Maximum (MAX), Minimum (MIN), Maximum minus Minimum (MAX - MIN), and Average (AVG) readings. Press the button for 1 second or more to exit.

Note:
1. Auto Power Off feature will be disabled automatically in this mode.
2. To retain the readings, press the HOLD button to stop updating the measurement
before disconnecting the test leads.
CREST capture mode
Press and hold the CREST button for one second or more to activate CREST (Instantaneous peak hold) mode to capture voltage or current signal duration as short as 0.8ms. This mode is available in DCV, ACV, DCA, & ACA functions. The LCD annunciators “C” & “MAX” turn on. The meter beeps when new maximum or minimum reading is updated. Press the button momentarily to read throughout the Maximum (MAX), Minimum (MIN), and Maximum minus Minimum (MAX⁻ MIN) readings. Press the button for 1 second or more to exit CREST capture mode.

Note:
1. Auto Power Off feature will be disabled automatically in this mode.
2. To retain the readings, press the HOLD button to stop updating the measurement before disconnecting the test leads.

Manual or Auto-ranging
Press the RANGE button momentarily to select manual-ranging, and the meter will remain in the range it was in, the LCD annunciator AUTO turns off. Press the button momentarily again to step through the ranges. Press and hold the button for 1 second or more to resume auto-ranging.
Note: Manual ranging feature is not available in Hz function.
**SORT™ mode**

Press and hold the **SORT** button for one second or more to activate SORT™ mode. The LCD annunciators “S” & “MAX-MIN AVG” turn on. SORT™ only holds & displays stable measurement, and counts the event number by the secondary display. The meter beeps when new stable reading is captured. Press the button momentarily to read throughout the Maximum (MAX), Minimum (MIN), Maximum minus Minimum (MAX− MIN), and Average (AVG) readings with event numbers out of the captured measurements. Press the button for 1 second or more to exit.

![SORT™ mode diagram]

**Note:**

1. Auto Power Off feature will be disabled automatically in this mode.

**Data Store & Recall**

Press the **STORE** button momentarily to store the display for later view. The LCD annunciator MEM will blink two times to confirm storage. The memory will remain even in auto power mode until the rotary switch is switched to the OFF position. Press the **RECALL** button momentarily to recall the stored display in any meter function for quick reference. Press any other button **EXCEPT** RECALL momentarily to resume measurement.
Relative modes
Press the $\Delta$%.U button momentarily to enter the Relative mode $\Delta$. This allows the meter to set the displaying reading as the reference value and offset (zero) the display. The meter consecutive measurements will then be displayed as the relative reading to the reference value. Practically all displaying readings can be set as the reference value including MAX/MIN/AVG readings of RECORD & SORT features.
Press the $\Delta$%.U button momentarily again to show the Relative reading in terms of percentage change %. The bar-graph will use the reference value as the center zero point and indicates the + - percentage changes in auto-ranging zoom mode.
Press the $\Delta$%.U button momentarily again to show the Relative reading in terms of per unit U. The reference value is considered to be one base unit. The meter consecutive measurements will then be displayed as the ratio to the base unit.
Press and hold the $\Delta$%.U button for one second or more to exit.

Auto Power Off (APO)
The Auto Power Off (APO) mode turns the meter off automatically to extend battery life after approximately 4.5 minutes of no activities. Activities are specified as: 1) Rotary switch or push button operations, and 2) Significant measuring data readings of above 10% of range. That is, the meter will intelligently avoid entering the APO mode when it is under normal measurements. To wake up the meter from APO, turn the rotary switch to an adjacent position.
Note:
1. Always turn the rotary switch to the OFF position when the meter is not in use.
2. For maintenance purpose, press the RANGE button while turning the meter on to shorten the APO timing to 5 seconds.

Disabling Auto Power Off
Press the 4000 button while turning the meter on to disable the Auto Power Off (APO)
**Input warning**
The meter beeps as well as displays “InErr” to warn the user against possible damage to the meter due to improper connections to the μA, mA, or A input jacks when other function (like voltage function) is selected.

**Line filter frequency selection**
Press the 40000 button while turning the meter on to display the set frequency. Press the SELECT button for 50Hz or press the STORE button for 60Hz to cope with your power line frequency. Then press the RANGE button to store the selected frequency. Selecting the appropriate line filter frequency can maximize the meter’s noise rejection ability.

**Set Beeper Off**
Press the SELECT button while turning the meter on to disable the Beeper feature. This does not disable the input warning beeper.

**5) MAINTENANCE**

**WARNING**
To avoid electrical shock, disconnect the meter from any circuit, remove the test leads from the input jacks and turn OFF the meter before opening the case. Do not operate with open case. Install only the same type of fuse or equivalent.

**Cleaning and Storage**
Periodically wipe the case with a damp cloth and mild detergent; do not use abrasives or solvents. If the meter is not to be used for periods of longer than 60 days, remove the battery and store it separately.

**Trouble Shooting**
If the instrument fails to operate, check battery, fuses, leads, etc., and replace as necessary. Double check operating procedure as described in this user’s manual.

If the instrument voltage-resistance input terminal has subjected to high voltage transient (caused by lightning or switching surge to the system) by accident or abnormal conditions of operation, the series fusible resistors will be blown off (become high impedance) like fuses to protect the user and the instrument. Most measuring functions through this
terminal will then be open circuit. The series fusible resistors and the spark gaps should then be replaced by qualified technician. Refer to the LIMITED WARRANTY section for obtaining warranty or repairing service.

Battery and Fuse replacement
The meter uses a single standard 9V alkaline battery (NEDA1604A, JIS6AM6, IEC6LF22), a 500V/0.63A IR 200kA fast acting F fuse (FS 1) for μA/mA current input, and a 600V/15A IR 100kA fast acting F fuse (FS 2) for A current input.

Loosen the screws from the case bottom. Lift the end of the case bottom nearest the input jacks until it unsnaps from the case top. Replace the battery and the blown fuse(s). Replace the case bottom, and ensure that all the gaskets are properly seated and the two snaps on the case top (near the LCD side) are engaged. Re-fasten the screws.
6) SPECIFICATIONS

GENERAL SPECIFICATIONS

Display: 3-3/4 digits 4000 counts or 4-3/4 digits 40000 counts selectable (5 digits 99999 counts for Hz), and 4 digits 9999 counts dual display LCD

Polarity: Automatic

Update Rate:

3-3/4D Data: 5 per second nominal;

4-3/4D Data: 1.25 per second nominal;

43 Segments Bar graph: 128 per second max

Low Battery: The indicator appears when the battery voltage drops below approx. 5.8V

Operating Temperature: 32F to 122F (0°C to 50°C)

Storage Temperature: -4F to 140F (-20°C to 60°C), 80% R.H. (with battery removed)

Relative Humidity: 80% at 32F to 95F (0°C to 35°C), 70% at 95F to 122F (35°C to 50°C)

Temperature Coefficient: Nominal 0.15 x (specified accuracy) / @ 23F - 65F or 83F - 122F (0°C to 18°C or 28°C to 50°C), or otherwise specified

Altitude: Operating below 2000m

Power Supply: Single Alkaline 9V battery NEDA1604A, JIS6AM6 or IEC6LF22

APO Timing: Idle for 4.5 minutes

APO Consumption: 20µA typical

Sensing: True RMS conversion

Power Consumption: 12 mA typical

Weight: 390 gm; 500 gm with holster

Dimension: L186mm X W87mm X H35.5mm; L198mm X W97mm X H55mm with holster

Accessories: RS232 adapter cable, RS232 software floppies, Test leads (pair), holster, battery installed, and user's manual

Safety:

V/R : Category IV 600V ac and dc, and Category III 1000V dc and 750V ac.

µA/mA : Category III 500V ac, and Category II 300V dc.

A : Category III 600V ac, and Category II 300V dc.

Transient protection : 8kV (1.2/50µs surge)

E.M.C.: Meets EN55022(1994/A1; 1995/Class B) and EN50082-1(1992)

In an RF field of 3V/m:

Capacitance function is not specified

Other function ranges: Total Accuracy = Specified Accuracy + 30 digits

Performance above 3V/m is not specified
ELECTRICAL SPECIFICATIONS

Accuracy is ± (% reading digits + number of digits) or otherwise specified, at 73°F ± 41°F (23°C ± 5°C) & less than 75% R.H. True RMS ACV, (DC+AC)V, & ACA accuracies are specified from 5% to 100% of range or otherwise specified. Maximum Crest Factor <3:1 at full scale & <6:1 at half scale, and with frequency component within the specified frequency bandwidth for non-sinusoidal waveforms.

Sensitivity:

- 5Hz - 100kHz*: 200mV rms sinewave or 600mV p-p;
- 100kHz - 500kHz: 400mV rms sinewave or 1.2V p-p;
- 500kHz - 2MHz: 850mV rms sinewave or 2.6V p-p;
- 2MHz - 4 MHz: 1V rms sinewave or 3V p-p

*Pulse Width 3µs in this frequency range

Update Rate: 1.2 per second nominal

Temperature coefficient: 0.05 X (Specified accuracy) @ 23°F - 65°F or 83°F - 122°F (0°F - 18°C or 28°F - 50°C)

Overload protection: 600V DC/AC rms

Overload Protection: 600VDC/VAC rms

Audible Continuity Tester

Audible threshold: between 10Ω and 60Ω. Response time < 150µs
Overload protection: 600VDC/VAC rms
dBm

At 600Ω, -6.74dBm to 54.25dBm,

Accuracy: ± 0.25dB + 2d (@40Hz to 20kHz)

Selectable reference impedance of 4, 8, 16, 32, 50, 75, 93, 110, 125, 150, 200, 250, 300, 500, 600, 800, 900, 1000, 1200Ω

Input Impedance: 10MΩ, 30pF nominal

Update Rate: 1.1 per second nominal

Overload protection: 780Vrms / 1000Vpeak

RECORD mode

Nominal Response for DC: 50ms to 80%, 100ms to 99%

Nominal Response for AC: 50ms to 80%, 100ms to 95%

Accuracy: Specified accuracy ± 10 digits for changes 200ms in duration for DC (± 40 digits in AC)

Auto-ranging buffer: 1.5s (except Cx, & AC+DCV)

CREST mode

Accuracy: Specified accuracy ± 220 digits for changes 0.8ms in duration

SORT mode

Nominal sort rate: 0.2s (except Cx, & AC+DCV)

Accuracy: Specified accuracy ± 5 digits
LIMITED WARRANTY

AMPROBE warrants to the original product purchaser that each product it manufactures will be free from defects in material and workmanship under normal use and service within a period of three years from the date of purchase. AMPROBE’s warranty does not apply to accessories, fuses, fusible resistors, spark gaps, batteries or any product which, in AMPROBE’s opinion, has been misused, altered, neglected, or damaged by accident or abnormal conditions of operation or handling.

To obtain warranty service, contact your nearest AMPROBE authorized agent or send the product, with proof of purchase and description of the difficulty, postage and insurance prepaid, to AMPROBE INSTRUMENT. AMPROBE assumes no risk for damage in transit. AMPROBE will, at its option, repair or replace the defective product free of charge. However, if AMPROBE determines that the failure was caused by misused, altered, neglected, or damaged by accident or abnormal conditions of operation or handling, you will be billed for the repair.

THIS WARRANTY IS EXCLUSIVE AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE. AMPROBE WILL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES.
